

123PhoneLine

The Analogue Line that works over the mobile network

Introduction

123PhoneLine is a long-awaited solution in the UK Telecoms industry for individuals, occupational therapy teams and businesses looking to retain analogue lines beyond the planned UK switch off of the UK analogue network (Jan 2027).

123PhoneLine complements our existing 123Converter product, which provides an analogue line via the Internet using VoIP technology. **123PhoneLine** is designed for customers needing a basic analogue phone line with 24/7/365 availability, even when there is no Internet or mains power.

At its heart, **123PhoneLine** uses the mobile phone network for connectivity. It does not require Line Rental, Internet or WiFi. Furthermore, **123PhoneLine** includes embedded battery backup and can work for up to 15 hours without mains electricity.

TRADITIONAL ANALOGUE PHONE LINES ARE BEING SWITCHED OFF FROM JAN 2027.

123PHONELINE IS AN ANALOGUE PHONE LINE WHICH WORKS OVER THE UK MOBILE NETWORK.

Application: Basic Phone Line Replacement

Whilst most analogue phone services will migrate to VoIP telephony – VoIP telephony requires an Internet service and usually fails when there is a power outage. Some people do not want to be forced to have the internet and they need the comfort of knowing their phone line will work even if there is a mains failure.

Application: Elderly, Care Homes & Occupational Therapy

There are hundreds of thousands of vulnerable phone line users in the UK where existing telephony equipment requires a simple analogue line which works even when there is power failure. This includes specialised/adapted telephones, movement and fall monitors and emergency call alarms.

Application: Lifts and Alarms

There are an estimated 300,000 lifts in the UK, all of which need emergency Phones and most of which are still analogue. There are an estimated 1,000,000 alarms in the UK, a large percentage of which are still connected with an analogue phone line.

Using 123PhoneLine

123PhoneLine is ready to use straight out of the box – no configuration is required. It includes a new UK phone number beginning with 01 or 02 with an Area-code of your choice. You can also port your existing phone number from your old analogue line over to a **123PhoneLine**.
