

123PhoneLine

The Analogue Line that works over the mobile network

Introduction

123PhoneLine is a simple solution for businesses and individuals needing an Analogue Line beyond the planned UK switch off of the traditional analogue network (Jan 2027).

123PhoneLine includes integral power backup enabling the Analogue Line to continue working for up to 15 hours without mains electricity.

123PhoneLine is different to almost every other Analogue Line replacement product in the industry because it does not require Internet or WiFi.

Your phone number on **123PhoneLine** can begin with 01, 02 or 07. Furthermore, you can bring your existing 01/02 number over to 123Telecom if required.

123PhoneLine is a DaaS (Device-as-a-Service) product with an initial cost followed by a monthly ongoing service charge. The required SIM card is embedded within the unit and the SIM rental is Included with the 123PhoneLine rental.

Note that outbound calls are free when included in a calls bundle or invoiced monthly in arrears.

PLUG YOUR ANALOGUE PHONE INTO 123PHONELINE AND IT WILL MAKE AND RECEIVE CALLS VIA THE UK MOBILE NETWORK.

Using 123PhoneLine

123PhoneLine is ready to use straight out of the box and requires no configuration whatsoever. Simply connect the aerial (included) to the back of the unit and plug in your phone into one of the two sockets using the converter cable (included) if necessary.

You can then connect the power supply and switch on. After about 1 minute, the LCD display will show you the strength of the mobile network signal and the current date & time. Once these details are displayed you can make inbound and outbound calls to and from your Analogue phone.

The button on the rear of the unit can be used to list the last 10 calls which were made in or out of **123PhoneLine**.

Application: Basic Phone Line Replacement

Whilst most analogue phone services will migrate to VoIP telephony – VoIP telephony requires an Internet service and usually fails when there is a power outage. Some people do not want to be forced to have the internet and they need the comfort of knowing their phone line will work even if there is a mains failure.

Application: Elderly, Care Homes & Occupational Therapy

There are hundreds of thousands of vulnerable phone line users in the UK where existing telephony equipment requires a simple analogue line which works even when there is power failure. This includes specialised/adapted telephones, such as large button phones, phone with hearing aid amplification and equipment for movement and fall monitors and emergency call alarms.

Application: Lift Line and Taxi Line AutoDialler

Simply programme 123PhoneLine with the phone number of the Lift (or Taxi) control centre and 123PhoneLine will automatically dial the control centre the instant the Analogue phone goes off-hook. If multiple control centre numbers are added, 123PhoneLine will sequence dial through the numbers until the call is answered.

123PhoneLine vs Traditional Analogue Line

123PhoneLine has been designed to deliver as much of the functionality of an analogue line as possible.

Take a look how it compares, but remember that the traditional Analogue Lines can no longer be ordered or installed in the UK.
