

KONTACTABLE

Quad-Network Data eSIM

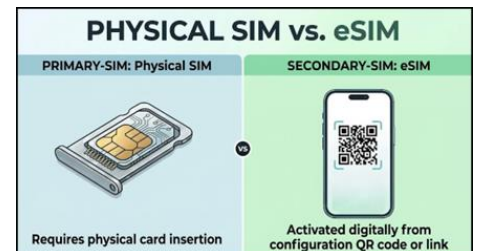

Keep Your Mobile Devices Connected Across All Four Mobile Networks

Accessing the Internet on your mobile device is essential for modern business, yet all the UK networks fall short of the coverage they should be providing, especially outside major urban areas.

Your Primary-SIM powers your 07 mobile number, calls, messaging and data. However, when the Internet on your Primary-SIM becomes unusable, other networks may well be available but you cannot use them.

The Solution: A Quad-Network Secondary eSIM

Most modern smartphones support a secondary digital SIM known as an eSIM (Embedded SIM). There is no physical card to insert—setup takes under two minutes by scanning a QR code or clicking an activation link sent via email.

- **Compatibility:** Supported by Apple since 2018 (iPhone XR, iPhone 11 and newer). Supported by Samsung since 2020 (Galaxy S20 and newer), and most modern smartphone brands, but check your specific device eSIM support online.
- **Seamless Switching:** When your phone data is set to Secondary-SIM, your phone automatically connects to **EE, O2, Vodafone, or 3**—whichever offers the strongest local signal at that exact moment.
- **Phone Number Unaffected:** Your 07 phone number remains active on your **Primary-SIM** network for calls and texts.
- **Free European Roaming:** Includes seamless data roaming via partner networks across Europe at no extra charge.

Data Bundle Options

Whilst most clients choose our 10GB option, we offer five data bundles: 5GB, 10GB, 15GB, 20GB and 25GB. You can choose “zero overusage charges” or “allow PAYG overusage” with a maximum monthly expenditure limit.

Fixed IP Address Option

Fixed IP addressing on mobile SIMs is incredibly rare, but our SIMs do support it. Furthermore, the IP is the same regardless of which of the four networks you are connected to at any given instant.
